

DESTINY 2: SCOURGE OF THE PAST

The Complete Raid Compendium — Navigation, Doors, Callouts & Encounter Flow

Historical reference. Scourge of the Past was a six-player Black Armory raid set in the Botza District beneath the Last City. It was later vaulted, so this document describes the original raid as it functioned when playable.

What this guide adds

This compendium is intentionally written like a room-by-room field manual rather than a short strategy guide. It emphasizes physical navigation: where you enter, which opening to take, which doors or panels matter, what landmarks identify a route, and how the spaces connect. Encounter mechanics are included alongside navigation so a team can use one document while learning the raid.

Raid at a glance

Section	Location / purpose	Primary navigation idea
1	Botza District — opening Berserker	Move toward the central structure; use the Schnell building as the main landmark.
2	Botza Sewers — maze	Drop into the sewers and use the route matching your descent point.
3	Botza Underground — Servitor chase	Two panels open the chase; follow the Sparrow track; two panels close the exit door.
4	Vault Access — Phase Radiance / tanks	Rotate between surface and underground through the electric barriers.
5	Insurrection Prime — final boss	Use the map, four energy stations, six Berserker locations, and three tank plates.

Core callout vocabulary

Callout	Meaning
Schnell	Large landmark building with the neon bunny sign; used as the north/top reference.
#1 / #2 / #3	Tank spawn / plate locations in the open Botza Ruins arena: top, bottom-right, bottom-left.
North / East / South / West	Four energy-station directions around the holomap: #1 north, #2 east, #3 south, #4 west.
Top-left / Mid-left / Bottom-left / Top-right / Mid-right / Bottom-right	Open door / Berserker locations on the final encounter map.
Cube / Sphere / Pyramid	The three Phase Radiance generator symbols underground.

1. BOTZA DISTRICT — OPENING ENCOUNTER

The raid begins in a large urban space in the Last City. The area is open enough to use Sparrows, with buildings, alleys and rooftop patios. The objective is not to follow a narrow hallway: the team crosses the district toward the central Fallen technology and the first Berserker.

Navigation — start to Berserker

- Spawn in the Botza District and orient toward the center of the district rather than hugging the perimeter.
- Use the central structures and the prominent Schnell building as your reference point. The Schnell building has a distinctive neon bunny image.
- Move to the central Fallen-tech structure. The Berserker is initially resistant/immune until its suppression-field mechanic is exposed.
- When the Berserker begins its relevant attack, two Guardians position themselves on opposite sides so the glowing orange weak points on its chest and back can be exposed and destroyed.
- Kill the Berserker and interact with the resulting battery/orb to charge the holomap and begin the directional battery phase.

Encounter mechanics

- The Berserker's orange chest/back targets are the key to making it vulnerable.
- After the first battery is deposited, the holomap becomes the raid team's navigation board.
- The map shows players, Berserkers and energy stations. One Berserker is marked as the target carrying the required pair of batteries.
- Picking up a battery gives Ionized, preventing the same player from repeatedly handling batteries; rotate carriers.

Map-reader setup

For learning groups, designate one person to remain at the holomap and verbally route battery carriers. Common final-encounter callouts use the Schnell building as north/top, with stations numbered clockwise around the arena.

Station	Direction	Landmark / function
1	North / top	In front of the Schnell building; holomap/tank-area landmark.
2	East / right	Eastern energy station.
3	South / bottom	Southern energy station.
4	West / left	Western energy station.

Transition out

After the required battery deposits, the electrical barriers blocking the route downward disappear. The team drops into the Botza sewer system.

2. BOTZA SEWERS — DETAILED MAZE NAVIGATION

This is the most route-sensitive traversal in the raid. The sewer maze has multiple possible starting points depending on which side of the Botza District you descended from. Lamps can be activated as breadcrumbs. The target is a large circular drop/opening that leads deeper into the underground route.

Important rule

Do not memorize only one route. First identify which station/side you dropped from. Then use the matching route below. The original maze layout can place the team at different starting positions.

Route A — descend at Station 1 / Schnell

- After dropping in, locate the nearby cave entrance.
- Turn so the cave entrance is on your left.
- Move forward and pass two tunnel entrances.
- Take the third tunnel on the left.
- Continue forward until you reach the gap/open chamber.
- Cross the gap and enter the leftmost tunnel in that room.
- Continue until the next decision point.
- Take the first left.
- Ignore two blocked tunnel openings on the left.
- Turn left again. This route brings you toward the central progression.

Route B — descend at Station 2

- Move forward from the starting tunnel.
- Take the first right.
- Turn left twice.
- Continue to the gap/open chamber.
- In the gap room, enter the rightmost tunnel.
- Proceed until you reach a wall, then turn right.
- Pass two intersections.
- Take the third right.
- Turn right again.
- Skip two blocked tunnels on the left.
- Turn left to rejoin the progression.

Route C — descend at Station 3

- Turn right from the starting position.
- Then turn left.
- Skip the next intersection.
- Take the following right.
- Turn right again.

- Skip two blocked tunnels on the left.
- Turn left to continue toward the exit.

Route D — descend at Station 4

- Move forward.
- Turn right.
- Turn left twice.
- Enter the cave.
- Inside the cave, turn right.
- As you exit the cave back into the tunnels, turn left.
- Skip four tunnel openings; the last two are blocked.
- Take the next left.

How to recognize that you are progressing

- Use lamps as breadcrumb markers rather than relying on compass directions.
- If you reach a completely blocked tunnel, do not force it; the correct route uses the open tunnel at the appropriate intersection.
- A distinctive pile of broken machinery and a wall opening/crevice can indicate the route toward the large chamber.
- The maze ultimately feeds into the Botza Underground traversal and the large chamber containing the Servitor-chase start.

3. BOTZA UNDERGROUND — ABLAZED GLORY / SERVITOR CHASE

The team enters a large underground chamber with multiple exits. The actual encounter begins at a heavy door/grate with two melee panels. A second matching door is used at the far end to stop the Servitor from following the team.

Before starting

- Have everyone gather in the starting chamber.
- Equip a Sparrow capable of rapid summoning; historically, quick-summon / reduced-cooldown perks were strongly preferred.
- Identify both start panels before anyone activates them.
- Two players melee the two panels at essentially the same time. The door opens and the flaming Servitor, Ablazed Glory, begins the chase.

Race navigation — what to do

- Immediately mount Sparrows and travel away from the Servitor.
- The track is broadly linear, but it contains high and low routes, jumps, ramps, hazards, Fallen fire, and occasional forks that reconnect.
- Prioritize staying on the track over fighting. The Servitor is a chase/wipe threat, not a normal boss to stop and damage.
- At the far end, dismount quickly and use the two matching melee panels beside the exit door.
- Two players reaching the end is sufficient to operate the closing mechanism; the team should still aim to keep as many players alive as possible.

Eight-switch secret route

The chase contains hidden/red sensor switches. Touching the complete set changes the ending and opens the route to the hidden chest. The sensors do not require a separate button press: passing over them activates them. If the full set is activated, continue past the normal closing point and take the alternate route to the elevated chamber.

Secret-chest route

- After reaching the normal end/door area, do not immediately finish if the team is attempting the chest.
- Continue through the alternate opening once the switches have been activated.
- Follow the track into the tall chamber.
- Dismount and climb the interior platforms/pipes upward.
- At the top, enter the wall opening to reach the hidden chest route.

Navigation mental model

If you see...	Do this...
A fork/high-vs-low track	Choose the safe line; the routes reconnect.
A red sensor	Drive over it; it changes to green when activated.
The matching end door	Two players dismount and melee the side panels together.
The tall vertical chamber after the alternate route	Leave the Sparrow and climb upward.

4. VAULT ACCESS — PHASE RADIANCE & TANKS

After the chase, the raid moves into the Botza Ruins / Vault Ebisu area. The encounter alternates between a surface team and an underground team. The underground area contains three generator terminals, each displaying a symbol: cube, sphere, or pyramid.

Initial setup

- Enter the open Botza Ruins area and locate the Unhinged/Insurrection Servitor.
- Kill the Servitor to remove the electrical barriers and open the underground route.
- Split three players underground and three players topside.
- Underground players each take responsibility for one symbol terminal.
- Two terminals will present valid symbols for the current cycle; the third is scrambled/incorrect.

Underground route

- Enter through the now-open electric barrier.
- Follow the underground circular path to the three generator stations.
- Call the symbol you see before interacting so the team can confirm who is taking which one.
- When the correct symbol is activated, the player receives Phase Radiance.
- Repeat until the required Phase Radiance x2 is collected.
- When the surface team kills the reset Servitor, the electrical barrier state changes and the underground cycle resets.

Surface route & tank plates

- Three tank spawn/plate locations are associated with the arena.
- Deposit the required Phase Radiance at the appropriate generator/plate to spawn a Drake tank.
- Tanks are the primary damage tool for Insurrection Prime during this phase.
- Tanks have finite health and a timer; leave before the tank reaches critical condition.
- While tanks are active, the other team continues handling the underground generator cycle.
- Rotate teams between surface and underground so Ionized / Phase Radiance requirements do not stall the encounter.

Three tank locations

Callout	Position in arena
#1 / Top Mid	Upper/northern tank spawn.
#2 / Bottom Right	Southeastern tank spawn.
#3 / Bottom Left	Southwestern tank spawn.

Transition to final boss

Once Insurrection Prime's phase-one health is exhausted, the team proceeds into the same broad Botza Ruins environment for the final encounter. Treat the open arena as one continuous navigation space: the buildings and tank locations become the landmarks for the boss fight.

5. INSURRECTION PRIME — FINAL ENCOUNTER

The final encounter combines the raid's earlier navigation language with a large open arena. The most important physical landmarks are the map building, Schnell, the six Berserker locations, four energy stations, and three tank plates.

Starting the encounter

- Locate the opening Berserker near the starting building.
- Expose and kill the Berserker using the same chest/back suppression-field mechanic from the first encounter.
- Deposit the battery at the receptacle to activate the holomap.
- Insurrection Prime emerges from the center.
- Assign one map reader, one sniper/roamer, two battery teams, and a tank driver as needed.

Final encounter map language

Landmark	Common callout
Schnell building	North / top landmark.
Berserker 1	Top Left
Berserker 2	Mid Left
Berserker 3	Bottom Left
Berserker 4	Top Mid
Berserker 5	Top Right
Berserker 6	Bottom Right
Energy Station 1	North
Energy Station 2	East
Energy Station 3	South
Energy Station 4	West
Tank Plate 1	Top Mid
Tank Plate 2	Bottom Right
Tank Plate 3	Bottom Left

Map-reader procedure

- Stay at the holomap and keep visual awareness of incoming enemies.
- Identify the Berserker marked as the active target.
- Call the target using the six-location vocabulary.
- After a carrier picks up a battery, identify which energy station that battery belongs to and route the carrier using north/east/south/west callouts.
- Two batteries are produced per successful Berserker cycle; rotate carriers because of Ionized.
- Kill the Servitor when it jams/obscures the map so the map can be used again.

Weak-point / shield procedure

- While the battery teams work, the remaining players clear enemies and shoot Insurrection Prime's glowing shield-generator weak points.
- The weak points appear around the mech's shoulders, back, waist/sides and knees.

- Destroying the required weak points removes the protective shield and permits the damage sequence.
- A tank can be used to stun Insurrection Prime; the cockpit opens after the stun, exposing the pilot.

6. DAMAGE PHASE — BUFF PAIRING & POSITIONING

Once the shield is down and the tank has performed its stun, the team groups for damage. Insurrection Prime periodically emits a pulse that assigns one of three charge types: Angular, Continuous, or Parallel.

The pairing rule

- There are three buff types: Angular, Continuous and Parallel.
- Two players share each buff type.
- Players with the same buff should stay together to increase their damage output.
- Avoid standing with a player who has a different buff when the next pulse occurs; mismatched pairing can kill the involved players.
- After each pulse, read your own buff and immediately move to the matching partner/group.

Simple formation callout

Left	Center	Right
Angular	Continuous	Parallel

Alternative CAP formation

A commonly used safe-area formation placed the three buff groups on three elevated platforms over an electric gate near the green building. From left to right, the mnemonic was **C-A-P**: Continuous, Angular, Parallel. Use whichever formation your team has agreed upon before damage begins.

Damage-cycle checklist

- Tank stuns Prime.
- Group for damage.
- Read the buff pulse.
- Move to the matching buff partner/group.
- Damage until the next pulse.
- Re-sort immediately after the pulse.
- Repeat the buff-pairing movement for subsequent pulses.
- If the boss survives the available damage cycle, return to the Berserker/map/battery portion and rebuild the damage setup.

Arena survival landmarks

- Use the surrounding buildings for cover from rooftop snipers.
- Keep the holomap building accessible so the map reader can resume navigation immediately.
- Remember the three tank plates: top-mid, bottom-right, bottom-left.
- Avoid drifting into the middle of the arena without a reason; Prime's attacks and Fallen pressure make open-ground movement dangerous.
- During learning runs, announce both the intended destination and the direction: e.g. "Bottom-right station, east side" rather than only "two."

7. FULL RAID WALKTHROUGH — ROOM TO ROOM

Use this as the one-page mental route from spawn to chest. The exact encounter execution is expanded in the preceding sections.

Step	Navigation / action	Stop condition
1	Spawn in Botza District; move toward center.	Reach the central Fallen-tech/Berserker area.
2	Expose the Berserker's chest/back weak points and kill it.	Battery obtained.
3	Deposit first battery and read the holomap.	Required battery routing becomes active.
4	Route battery carriers to the correct energy stations.	Required deposits complete.
5	Drop through the opened sewer access.	You are in the maze.
6	Identify your sewer starting point: Station 1, 2, 3 or 4.	Use matching route card.
7	Follow tunnels to the large underground chamber.	Reach the Servitor-chase door.
8	Melee both start panels simultaneously.	Ablazed Glory begins chasing.
9	Sparrow through the track; optionally hit all hidden sensors.	Reach the end door / alternate chest route.
10	At normal exit, two players melee the end panels together.	Chase encounter complete.
11	If doing chest: continue through alternate route, climb vertical chamber, enter wall opening.	Hidden chest.
12	Proceed into Vault Ebisu / Botza Ruins.	Reach Insurrection Prime phase-one area.
13	Kill reset Servitor and enter underground generators.	Phase Radiance cycle.
14	Match cube/sphere/pyramid terminals; rotate teams.	Phase Radiance x2 / tank plates active.
15	Spawn Drake tanks and damage Prime; rotate underground/surface teams.	Phase-one boss health depleted.
16	Return to holomap/map-reader structure for final fight.	Final Berserker and map active.
17	Route two-battery Berserker cycles and destroy Prime weak points.	Shield removed / tank ready.
18	Stun Prime with tank; group for damage.	Damage phase.
19	Sort Angular / Continuous / Parallel buffs into matching pairs.	Survive pulses and continue DPS.
20	Repeat until Prime is defeated.	Final raid chest opens.

8. NAVIGATION CHEAT SHEETS

Sewer maze — ultra-short route cards

Start	Route shorthand
1 / Schnell	Cave left → skip 2 → 3rd left → gap → leftmost tunnel → 1st left → skip 2 blocked → left
2	Forward → 1st right → left → left → gap → rightmost tunnel → wall/right → skip 2 → 3rd right → right → skip 2 blocked → left
3	Right → left → skip intersection → right → right → skip 2 blocked → left
4	Forward → right → left → left → cave → right → exit/left → skip 4 → left

Final arena — directional cheat sheet

Reference	Location
North / Top	Schnell + Energy Station 1
East / Right	Energy Station 2
South / Bottom	Energy Station 3
West / Left	Energy Station 4
Tank #1	Top Mid
Tank #2	Bottom Right
Tank #3	Bottom Left

Final Berserker callouts

Top-left • Mid-left • Bottom-left • Top-mid • Top-right • Bottom-right
--

Damage buff callouts

Angular • Continuous • Parallel. Agree on one physical formation before starting DPS. A historically common formation used three elevated platforms over an electric gate near the green building, read left-to-right as C-A-P.

9. TEAM ROLES

Role	Primary job	Navigation responsibility
Map Reader	Watch holomap; call Berserker and battery destinations.	Must know six Berserker locations and four station directions.
Sniper / Roamer	Clear rooftop enemies and shoot Prime weak points.	Maintain line of sight across the open arena.
Battery Carrier A/B	Kill Berserker, collect batteries, deliver to station.	Repeat the map reader's exact destination call.
Underground Team	Collect Phase Radiance during phase one.	Know cube/sphere/pyramid terminals and rotate safely.
Tank Driver	Spawn/use Drake; stun Prime; contribute to DPS.	Know all three tank plates and retreat before critical.
All Players	Clear enemies, survive, communicate buffs.	Use fixed landmark names instead of vague directional calls.

10. LEARNING-RUN FAILURE GUIDE

Problem	Likely navigation mistake	Correction
Lost in sewers	Wrong starting-route card.	Ask which station you descended from, then restart from the corresponding
Can't find the chase door	Team wandered beyond the central sewer route.	Look for the large chamber and matching two-panel blast door.
Servitor catches team	Players stopped to fight or split too far apart.	Treat the section as a race; prioritize Sparrow movement.
Missed secret chest	Not all hidden sensors were activated.	Practice the chase route specifically and call sensors as you pass them.
Map calls are confusing	Only numbers are being used.	Use direction + station: "east two," "north one," etc.
Battery carrier gets Ionized	Same players are doing every pickup.	Rotate carriers each cycle.
Underground team stalls	Wrong symbol terminal chosen.	Call cube/sphere/pyramid before interacting.
Tank dies early	Driver stayed in after critical state.	Exit before the tank reaches critical health.
DPS deaths	Different buffs are mixed when the pulse hits.	Immediately pair Angular with Angular, Continuous with Continuous, Parallel

11. HISTORICAL / SOURCE NOTES

This compendium was assembled from historical descriptions of the original Scourge of the Past raid, with particular emphasis on the physical route details that are easy to omit from short encounter guides. The uploaded Leviathan compendium was used as the requested formatting/model reference: it organizes the raid by spaces, mechanics, navigation principles, consolidated walkthrough, and quick-reference material. The navigation details for Scourge were cross-checked against multiple historical guide/wiki descriptions.

Reference used as the structural model: the uploaded "Destiny 2: Leviathan — The Complete Raid Compendium." It is organized as a room-by-room, encounter-by-encounter reference and includes a consolidated physical walkthrough and quick-reference tables. █filecite█turn0file0█L3-L20█

Web references consulted:

- Shacknews — Scourge of the Past raid guide (sewer maze, Servitor chase, Vault Access, Insurrection Prime).
- D2 Wiki — Scourge of the Past (sewer routes, encounter structure, map callouts and tank locations).
- Destinypedia — Scourge of the Past (opening Botza District, Servitor chase, final encounter and buff pairing).
- Prima Games — Scourge of the Past complete raid guide (encounter order, roles and final map terminology).

12. QUICK REFERENCE — PRINT THIS PAGE

START: Botza District → center → Berserker → battery/map → station deposits → sewers.

SEWERS: identify starting station → follow route card → large chamber → two-panel chase door.

CHASE: melee both panels → Sparrow → stay moving → optional sensors → end panels → chest route if desired.

VAULT ACCESS: Servitor → electric barrier down → 3 underground symbols → Phase Radiance x2 → tank plates → damage → rotate.

FINAL: Berserker → holomap → call six locations → batteries to N/E/S/W stations → weak points → tank stun → DPS.

DPS: Angular ↔ Angular, Continuous ↔ Continuous, Parallel ↔ Parallel. Re-sort after every pulse.

KEY LANDMARKS: Schnell = north; tank plates = top-mid / bottom-right / bottom-left; Berserkers = TL / ML / BL / TM / TR / BR.

Communication rule: Call destination + direction + landmark. Example: "Bottom-right Berserker, south side" or "Station 2, east."
